

1. I spent around 3 hours on this assignment.
2. I started working on this assignment around the first week it was assigned.
3. I found this homework to be quite easy. I was aware of the overall goal of the assignment; I was familiar with the software and files system; I already got the hard parts out of the way. There was nothing especially challenging about the assignment.
4. I didn't really learn anything about time management from this assignment other than "it's a good idea" as I managed my time well for this assignment.
5. I would utilize virtual functions more instead of static casting as it's safer and easier.
6. I had the most amount of trouble with type ids, as for some reason they would return the base class even after dereferencing. I ended up just using a variable to represent the type.
7. No additional comments.
